RE: Running Changes

Please be advised of the following product changes:

- We have improved the timers for some of our products. The new timer appearance has changed to include two line digital readouts showing elapsed time and pre-set time. The new timers have larger digits for improved readability. All of the other timer functions remain the same.
- In the rare occurrence that a customer complains of both pass and fail lights illuminating simultaneously on either the Beta D-50 or CA 1550 when in discharge mode, please contact us or have the customer contact us directly for repair/replacement.
- The Alpha C-25 charger now includes user adjustable cutoff voltage for both 12 and 24 volt settings. The weight of this unit is now 45 lbs.

Please see instruction handbook included in unit for complete details.

Thank you very much and please let us know if you have any questions.
